

PlanMill 12.2.1

Release Notes

January 20, 2010

PlanMill Release 12.2.1 (released January 19, 2010)

PlanMill Release 12.2.1 offers new enhancements, as well as addressing known and fixed issues.

1. Key features and enhancements

- **Project space/settings form/require overtime comment for billable or all tasks** -> *Time sheet will then show the overtime comment as compulsory.*
- **Request form:** New invoice reference field added. If reference is given here, it will be used in all invoice items related to that request. Otherwise projects invoice reference will be used.
- **Performance (under the hood):** Implemented latest jQuery Javascript library (v1.4) for faster user interface.

2. Known and fixed issues

In general

- **List view:** Fixed resetting and AJAX loading for letter-filter on Contacts, User & Accounts list views.
- **List view:** Fixed problem with interval filter got messed up when user switches language.
- **Off duty-hours:** Automatic acceptance of off duty-hours.
- **Accounts & contacts:** Passive account & contact status harmonization. When account set to passive all its contacts are also set as passive.

PlanMill Open API

- Error messages have been improved by adding stack trace (check if this needs some changes in your application)
- Location1 and location2 ID:s have been added to account.get to help you for example add contacts with location
- API Documentation is updated and improved.
 - Get -requests use the exact same columns that are selected for the API user in normal user interface of PlanMill. More list columns you can find from the "Personalize" -tool in list view.
 - Default filtering is the same; select the "All" -values for all filters, or select the filtering you want to use as default for all e.g. *task-related api get-requests*.
 - You can also include filter-parameters into your API requests (see available parameters and values from the html source of the list). Typical list filter parameters are: *viewby, intervalstart, intervalfinish, interval, week, etc.*
 - When you are doing inserts with API, you should always give all the fields a value even if they are not marked as required, because the default value might not be set for all fields.
 - For security reasons and so that your personal UI settings do not break your API requests, use a dedicated user for real application API requests, instead of your own.
 - The tools in each list view is easily available from the API (e.g. *project space -> Team -> add as team member*); if some tool is missing from the API, contact support@planmill.com

3. New and updated documents

- [PlanMill Work Schedules User Guide](#) (English)

4. General availability

- PlanMill Cloud/SaaS customers: **19.1.2010**
- PlanMill On-Premise customers: **1.2.2010**
